- Automatic systems
- Disaster prevention system: Aqua Barrier
- Fire water retention systems

Modular Design, interlocking components and custom design make this system one of the most versatile and reliable demountable flood defense system currently available. These barriers can be supplied for almost any configurations including arcs, closed rectangles or circles and straight runs of any length.

The system is ideal for protecting highways, long store fronts, wide vehicle entrances and for creating wide area flood defences. These systems can also be used to increase the height of concrete flood walls, quaysides and dams. The modular components and simplicity of design enable the system to be built on easy and quick - without the need for special skills or training.

With beams weighting less than 8 kg per meter, single handed installation is possible within safety guidelines for lifting.

A range of storage options exists - from wall mounted brackets to versatile trolleys / trailers to suit every application.
