- Desaster Prevention: Aqua Barrier
- Fire water retention systems

Lightweight construction, with high stability is the design philosophy of our window covers.

New innovative materials from the aerospace industry guarantee maximum stability and low weight.

The low weight at large formats allows the covering of complete doors.

Each cover is made to customer specification. Mounting on a permanent mounted steel frame or directly on the wall. The cover plate has a bare aluminium surface. All steel parts are galvanized.

For safe and proper storage of the covers corresponding wall brackets are available. Storage racks and transport trolleys can be supplied for all covers. If the storage facilities are limited or no staff is available, the covers can stay on side.

Powdercoating to all RAL colours is available.
